             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DB BG

This invention describes a novel vector (A) comprising (i) nucleic acid (I) encoding an expansin (II) and (ii) coupled sequences that allow expression of (I) in microorganisms. The recombinant expansins described in the invention are used in preparation, treatment and finishing of cellulose-based textiles (e.g. cotton) or in recycling of paper or for preparation of pulp from plant tissue, as a substitute for corrosive chemicals currently used in papermaking. Recombinant methods make possible large scale production of extensins possible. This sequence encodes the Cucumis sativus (cucumber) SI extensin homologue described in Sequence 684 BP; 163 A; 179 C; 164 G; 178 T; 0 other; Claim 2; Page 11-14; 22pp; German. Vector encoding an expansin, useful in treatment of cellulosic materials for paper recycling, providing large-scale production -Berendes F, 2002-155755/21. AAG80768. Expansin proteins which alter the mechanical strength of poly:saccharide(s) - useful in paper mfr. and recycling

60pp; English.

a member of a novel class of proteins that catalyse the extension of plant cell walls and the weakening of the hydrogen bonds in pure cellulose. It was obtd, by PCR amplification of cucumber seedling cDNA using primers based on isolated peptide fragments of the protein. The gene can be expressed in bacterial or other systems for use in recombinant expansin prodn. Expression of the gene in transgenic plants may allow alteration of plant growth characteristics, while expression in plant tissue cultures may allow improved prodn. Of useful chemicals. A cDNA clone (AAT13320) codes for cucumber expansin-29 (AAR94527), (Updated on 25-MAR-2003 to correct PF field.)

Sequence 681 BP; 161 A; 179 C; 164 G; 177 T; 0 other;

```

This invention describes a novel vector (A) comprising (i) nucleic acid (I) encoding an expansin (II) and (ii) coupled sequences that allow expression of (I) in microorganisms. The recombinant expansins described in the invention are used in preparation, treatment and finishing of cellulose-based textiles (e.g. cotton) or in recycling of paper or for preparation of pulp from plant tissue, as a substitute for corrosive chemicals currently used in papermaking. Recombinant methods make possible large scale production of extensins possible. This sequence encodes the Cucumis sativus (cucumber) extensin, csexpla, described in

                                                                                                                                                                                     The present invention relates to novel genes which encode cell wall hydrolass such as beta-galactosidase (beta-Gal), pectin methylesterase (PME), polygalacturonase (PG) and cell wall proteins such as expansin! (Expl) and expansin2 (Exp2) proteins from pear fruit. The nucleic acids are useful for regulating fruit ripening and for suppressing endogenous beta-Gal, PME, PG, Expl and Exp2 genes in any fruit or other plant organs, thus modifying the structure of the cell walls of the fruit or plant and providing for ripe yet firm fruit and vegetables. The genes may be used to screen a cDNA library or a genomic library from any species, to inhibit or enhance gene expression or to produce transgenic plants. The present sequence is a cDNA encoding pear expansin 2 protein.
                                                                                                                                         Sequence 1144 BP; 325 A; 258 C; 242 G; 319 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New beta-galactosidase, pectin methylesterase, polygalacturonase, expansin1, and expansin2 proteins and nucleic acids, useful for regulating fruit ripening or creating transgenic plants -

                                                                                                                       Н
                                                stresses
```

CC The invention relates to identifying a stress condition to which a plant CC cell has been exposed, comprising:

C( a) contacting nucleic acid representative of expressed polynucleotides coin the plant cell with an array or probes representative of the plant CC in the plant cell with an array or probes representative of the plant CC cell genome; and

CC (b) detecting a profile of expressed polynucleotides in the plant cell CC characteristic of a stress response. The method is useful in the producing plants contaction of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that cell contaction of the invention.

CC Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ઈ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
This invention describes a novel vector (A) comprising (i) nucleic acid (I) encoding an expansin (II) and (ii) coupled sequences that allow expression of (I) in microorganisms. The recombinant expansins described in the invention are used in preparation, treatment and finishing of cellulose-based textiles (e.g. cotton) or in recycling of paper or for preparation of pulp from plant tissue, as a substitute for corrosive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      N. tabacum DNA
                                                                                                                                                                                                                                                                                                                                                  Vector encoding an expansin, useful in treatment of cellulosic materials for paper recycling, providing large-scale production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nicotiana tabacum.

The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used
                                                                                                                                                                                                                                                                                                                                                                                          of an Arabidopsis thaliana stress regulated gene (ABZ12196 in methods of the invention.

Note: The sequence data for this patent is not represented specification but is based on sequence information supplied
                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (SCRI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           24-AUG-2001;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 28-FEB-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
                               The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising:

(a) contacting nucleic acid representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and

(b) detecting a profile of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used Note: The sequence data for this parent.
         Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office.
